

A booster shot will increase your immune response.

**YOU CAN GET THE PFIZER, MODERNA, OR THE J&J
COVID-19 VACCINE BOOSTER SHOT IF:**

**You're age 16 and older and you received 2 doses
of the Pfizer vaccine over 6 months ago.**

OR

**You're age 18 and older and you received 2 doses
of the Moderna vaccine over 6 months ago.**

OR

**You're age 18 and older and you received
the J&J vaccine over 2 months ago.**

Teens age 16–17 can **only get a Pfizer COVID-19 vaccine booster.**

**Adults age 18 and older can choose the Pfizer, Moderna, or J&J
COVID-19 vaccine for their booster shot **regardless** of which
vaccine they initially received.**

**People should talk to their health care provider about whether a
booster shot is appropriate for them.**

An additional dose is administered to improve moderately to severely immunocompromised people's immune response to their initial two-dose series of the Pfizer or Moderna COVID-19 vaccine.

YOU CAN GET AN ADDITIONAL DOSE OF THE PFIZER OR MODERNA COVID-19 VACCINE IF:

You received 2 doses of the Pfizer vaccine over 28 days ago and
You're moderately or severely immunocompromised*,
And you're age 12 and older.

OR

You received 2 doses of the Moderna vaccine over 28 days and
You're moderately or severely immunocompromised*,
And you're age 18 and older.

You should use the same COVID-19 vaccine (Pfizer or Moderna) that you received initially for your additional dose. Unlike a COVID-19 booster shot, the Pfizer and Moderna vaccines are not interchangeable for an additional dose.

People should talk to their health care provider about whether an additional dose is appropriate for them.

At this time, an additional dose is not recommended for people who received the J&J COVID-19 vaccine.
